

Oral Appliance Therapy an Alternative to CPAP

TIRED of Your CPAP!?!?

We can help.

Are you frustrated with your CPAP and looking for an alternative?

Are you tired of traveling with the bulk, and not sleeping comfortably?

CONSIDER A FEW POINTS:

Over 750,000 CPAPs are prescribed each year and they are the most commonly prescribed treatment of sleep apnea. Unfortunately, most patients are unaware of other options. Because of this, patients wear their CPAP less than prescribed and are not satisfied with their results. Studies have shown that patients prefer an oral appliance over their CPAP, once they are aware of other options. There is an easier and more comfortable solution to sleep apnea – contact your dental provider for more information.

Examples of Oral Devices used for sleep apnea & snoring therapy:
